

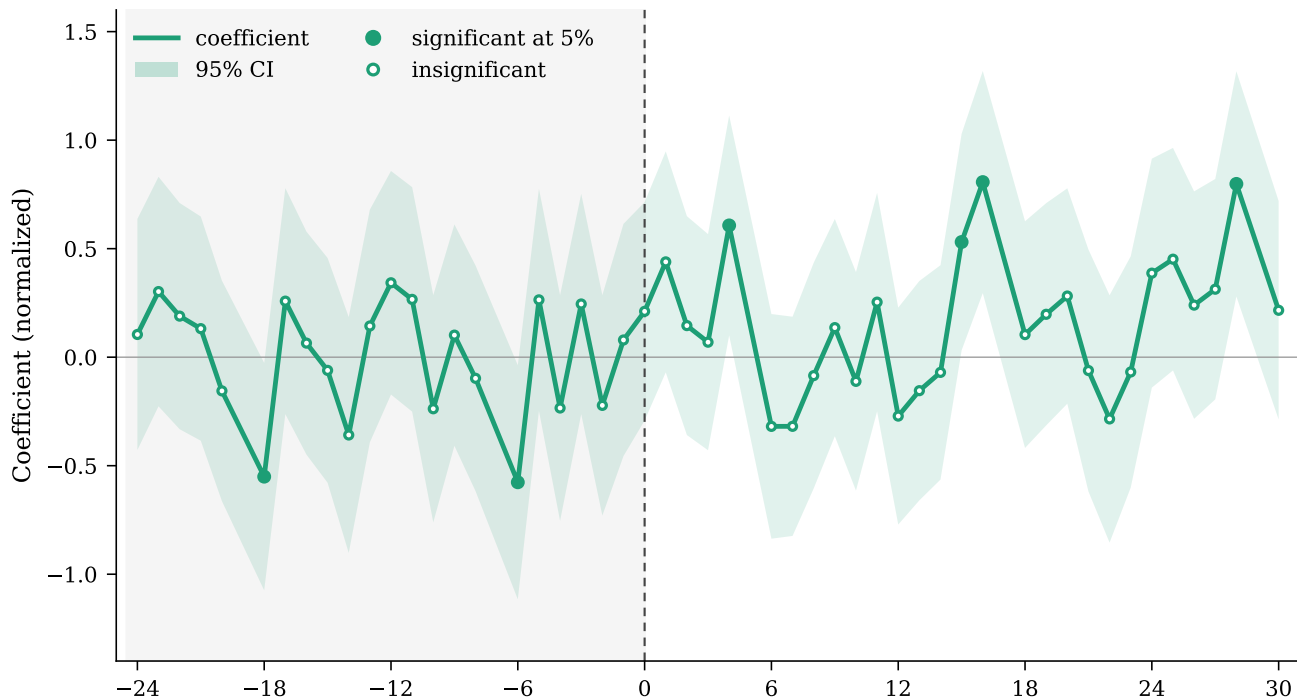

Figure 3. Event study --- MEX → US manufacturing exports (nearshoring test)

Notes: Coefficients from interacting the pre-tariff Chinese US import share with period dummies normalized so the pre-period mean equals zero. Two-way FE (HS6 + year-month). SE clustered at HS2 level (41 clusters). December months excluded to remove Comtrade reporting artifacts. Filled circles denote months where the 95% CI excludes zero. Shaded region is the pre-tariff period. $n = 191,763$.
